Introduction

A lot of people have been affected by this pandemic and have to spend a lot of time at home. Most of the people have someone to accompany them, and among them there are some; who are more lucky; to have their pets give them company. Pets are adorable creatures, who help you lighten your mood and bring joy on your face. They are amazing companions and especially pets like dog. Still people need human friends and with the world somewhat starting to recover from this and people starting to go out and move around they can make new friends with help of their dogs.

Proposed System

The project is based on the goals, for people to have a smooth transition from being indoors to getting back out again and having social interactions. For this we are proposing a system which will help people find companions based on their location and their preference of the person or the dog and its breed. This will help people to socialize again and get back to their normal lives.

Dataset

For this project a temporary dataset was collected which had attributes like:

- Dog Name
- Dog Age
- Dog Gender
- Dog Breed
- Owners Name
- Owner Age

- Owner Gender
- City
- State
- Zip-code
- Number of Dogs Owned by single individual

Dataset
